HOT IDEAS

VOLUME 7- SPRING

MAY 2007

WHICH ONE LOOKS LIKE YOUR BOILER? WHICH ONE WOULD YOU LIKE YOURS TO LOOK LIKE? WE RECOMMEND AND INSTALL

BURNHAM BRAND BOILERS

Some Features & Benefits of a Burnham boiler:

- Energy Star Compliant = high efficiency
- Oil Fired = energy savings
- Water or steam
- Cast iron section design = reliable
- Venting options = direct or natural draft
- Lifetime limited warranty
- **Many more benefits**

Call office if you would like more information or go to:

MEET OUR LEAD OIL BURNER
TECH: Mike Richards

Mike is a recent addition to the Port Oil family. He is a nationally-certified oil-heat technician that is currently working toward both his N.O.R.A. Gold certification and his Master's Oil-Heat Technician's license. In his spare time, he splits his time between playing drums in a local band and playing chauffeur to his three children.

We'll keep you warm...

Need to upgrade your furnace? We recommend and install Olsen brand furnaces.

Olsen has several oil-fired, warm air furnaces in a variety of sizes to fit almost anywhere.

No chimney, no problem. Olsen product line includes a direct vent furnace, which is a top quality, high efficiency balanced flue furnace that releases combustion products to the outdoors through a vent on the side of the house, rather than a traditional chimney. Much like a dryer's venting system, this method utilizes the burner to efficiently force the combustion products from the heating equipment.

Olsen furnaces have unique high-performance heat exchangers that can increase your energy savings & lower your fuel bills

For more information, call our office or go to:

****IMPORTANT FACTS****

Did you know it is best to keep your fuel oil tank 1/2 full or above during the warmer months? The less oil you have in your tank, the more condensation (i.e. water) collects inside. This can cause problems when the unit begins to run on a constant cycle during the heating season.

FOR CUSTOMERS WHO DO NOT GET THEIR HOT WATER FROM THEIR HEATING UNIT...

We suggest you run your heating system year round, even through the warmer weather months, for at least a few minutes once a month. This will burn off any condensation build up. This will also help ensure your heating unit will perform well during the heating season. This could save you a costly emergency service call in the middle of the night.

We also recommend not waiting to have your heating unit serviced. The best time to have service done is during the warmer months.

System 2000 is the 1st fully integrated heat & hot water system on the market. The system is activated on when you need heat or hot water via a digital heat manager. It provides multi-zone heat as well as heating pools & spas. System 2000 comes with a lifetime warranty & a 10-year labor allowance for the pressure vessel.

Warranty can be transferred to new owner if within the 1st 5-years. To explore many other features, benefits & models available please go to:

www.energykinetics.com/s2000

***** TANK GUARD INSURANCE *****

Our Tank Guard Insurance program, through Lincoln Laboratories, is an on-going program. Tank Guard Insurance protects you, the homeowner, if your above-ground oil tank leaks, for any reason. The annual cost is \$39.95. This is a bargain considering a new above-ground tank will cost about \$1,700 to replace without the insurance. To date, we have replaced 5 of our customer's leaking oil tanks at no charge. **Remember no one wants an environmental crisis.** For more information or to sign up for the insurance, please call our office.

If you own a gas or electric water heater throw it out. It's robbing you of fuel and money. Due to huge heat loss from the flue or the expense of electricity these dinosaurs should be brought to the scrap yard for recycling. A better solution is offered by indirect water heaters, which use the boiler to heat a fluid that is then circulated through a tank of water. The energy stored by the water tank allows the boiler to turn on and off less often, thereby saving energy. If used with a high-efficiency boiler and a well-insulated tank, this can be the least expensive means of providing hot water. Imagine having only one bill for your heating system...
